A week of one laptop, written down by itself

For one week, 12 to 18 October 2026, a laptop kept a log of itself. Not the work, only what the work left behind: what was copied, what was deleted, which notifications arrived, how warm the machine ran and how full its memory was.

Most of it is small. A word typed and taken back. A sentence copied and never pasted. A message that arrived while something else was open. None of it was meant to be kept.

Together those small things add up to a record of the week, and this book is that record. Every copy, every deleted word and every notification is somewhere in it.

Each of the seven days opens with its date and its totals. Then the log goes hour by hour, and the same day is drawn again in other ways: overlaid, stacked, as a map of the hours, as one square for every event.

The last pages fold out and put the whole week on a single sheet. Grey always means that nothing happened.

copy

Everything copied. Searches, fonts, colour codes, headlines, a sentence from an article.

delete

Every word typed and taken back. Slips, typos, second thoughts.

notification

Every notification that arrived. Mail, messages, someone posting after a long time.

heat

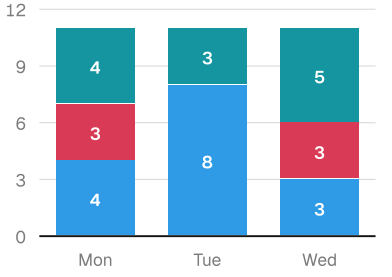
How warm the laptop was, minute by minute.

memory

How full the memory was, minute by minute.

Reading a column

every chart in the book is built the same way



The height is how many.
Each colour is one trace.
The number sits inside it.
White means nothing happened.

Every line of the log follows the same order.

10:23–10:28 30.8° 76% whatsapp 6 min
a stretch with one app: time, heat, memory, the app, how long

copy delete notification heat memory

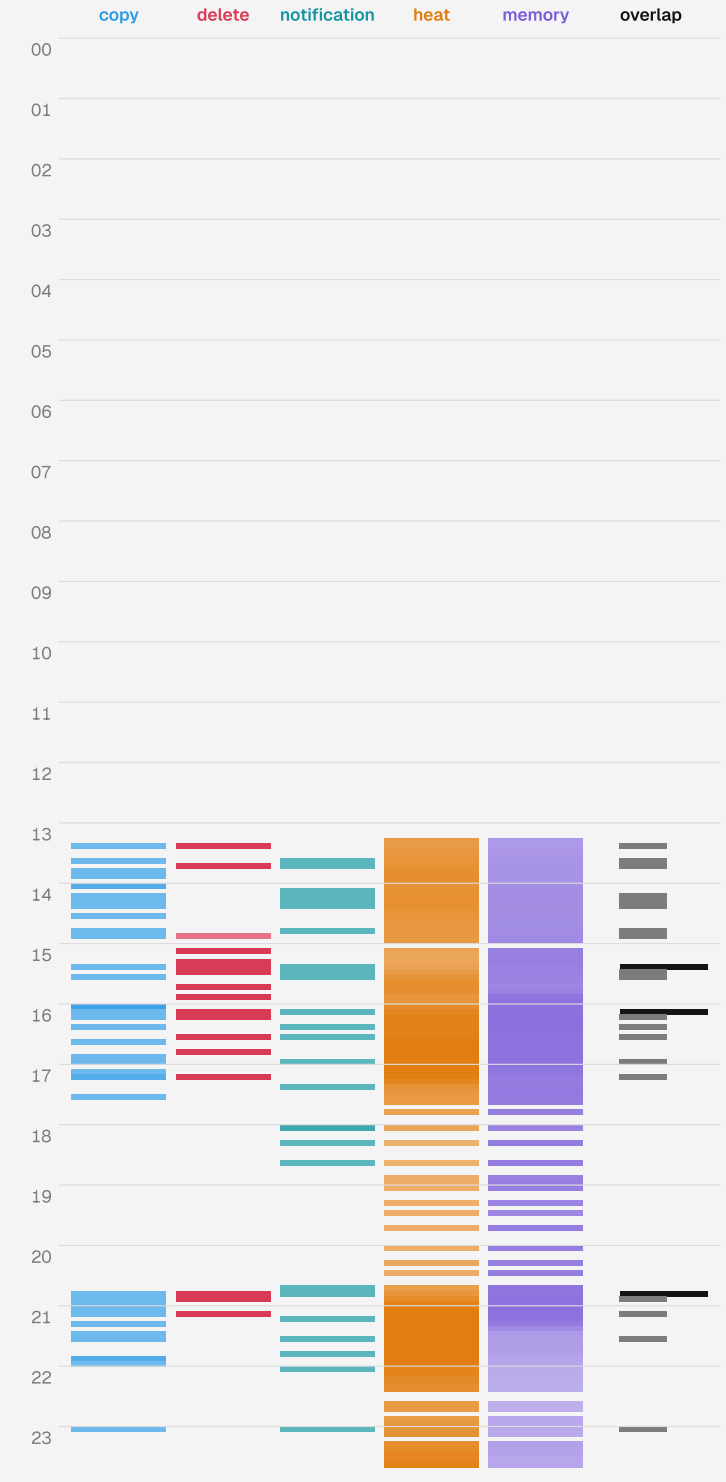
3 times, copying, deleting and a notification all landed inside the same five minutes.

Two of the three overlapped 19 more times.



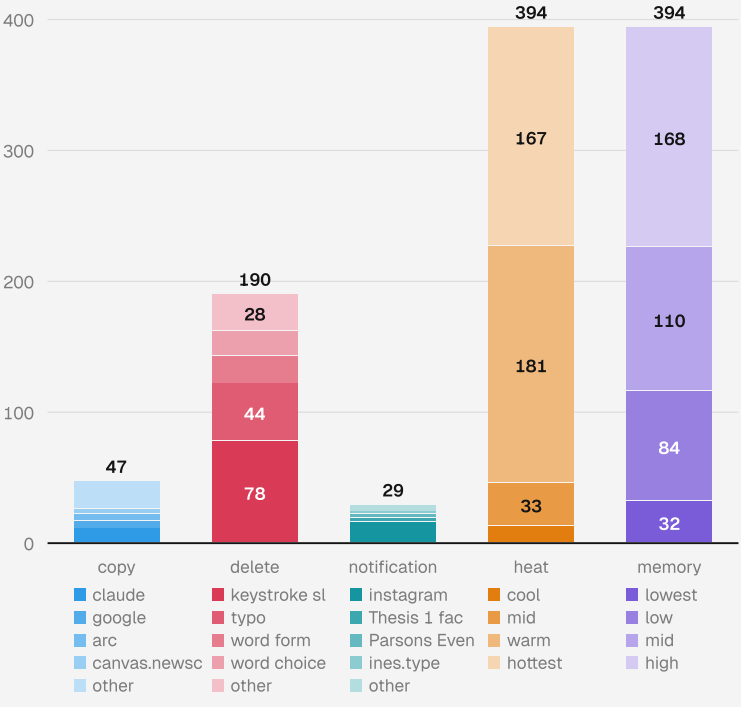
copy delete notification heat memory

claude is where 23% of the copying came from.

instagram sent 55% of the notifications, and 41% of the words I took back were keystroke slip.

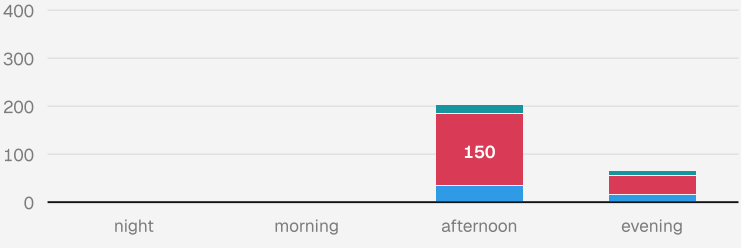
Inside each trace

the day in five columns; each tint is one of its parts



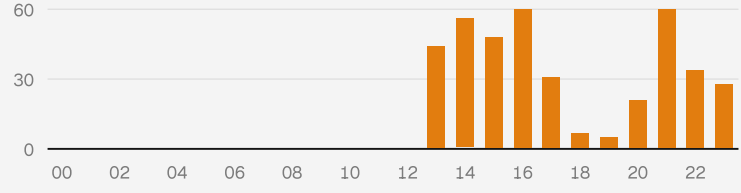
Through the day

events in each part of the day



Awake

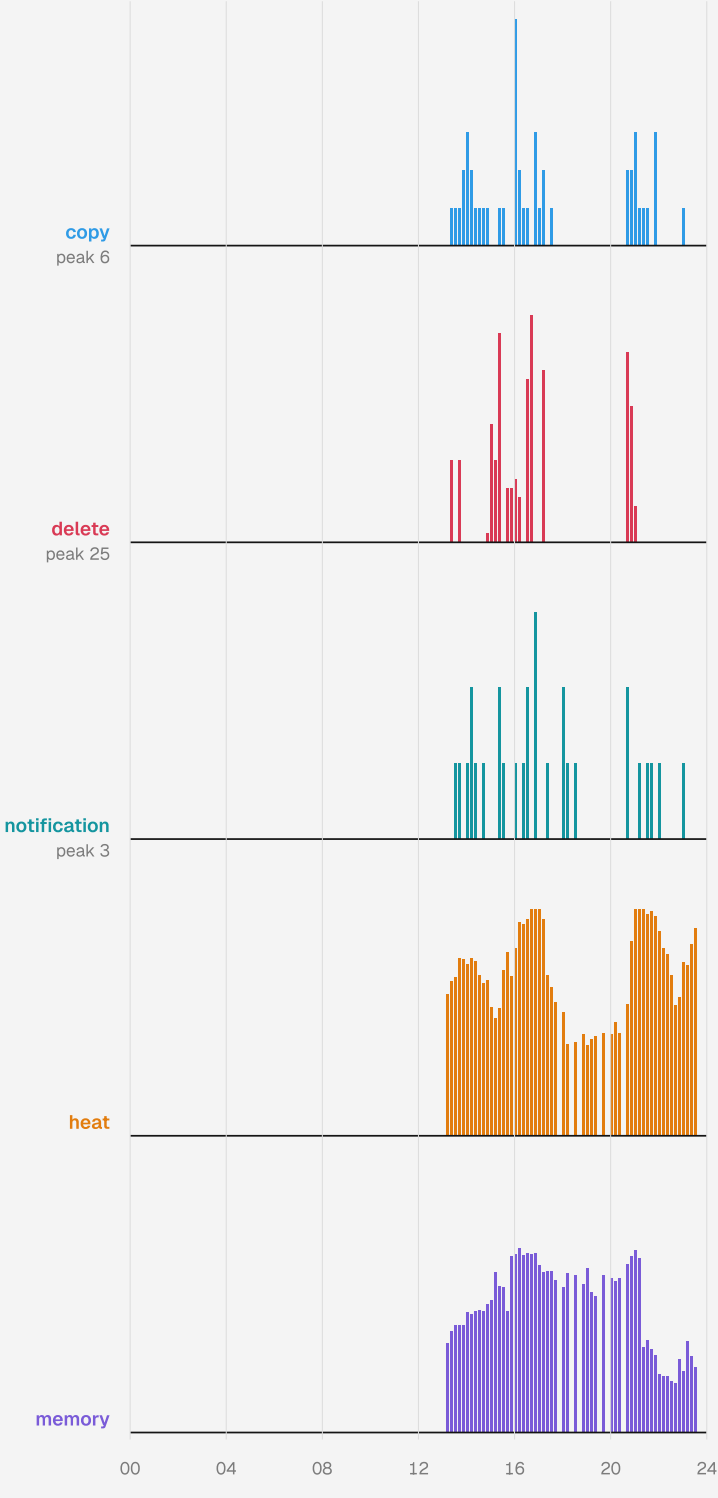
minutes the laptop was awake in each hour



copy delete notification heat memory

Around 16:40 things got frantic: 25 deleted words in ten minutes.

copy topped out at 16:00 (6), notification topped out at 16:50 (3).



copy delete notification heat memory

16:00 was the hour that mattered: 75 events.

Only 10 of the 24 hours had anything in them.

	copy	delete	notification	heat	memory

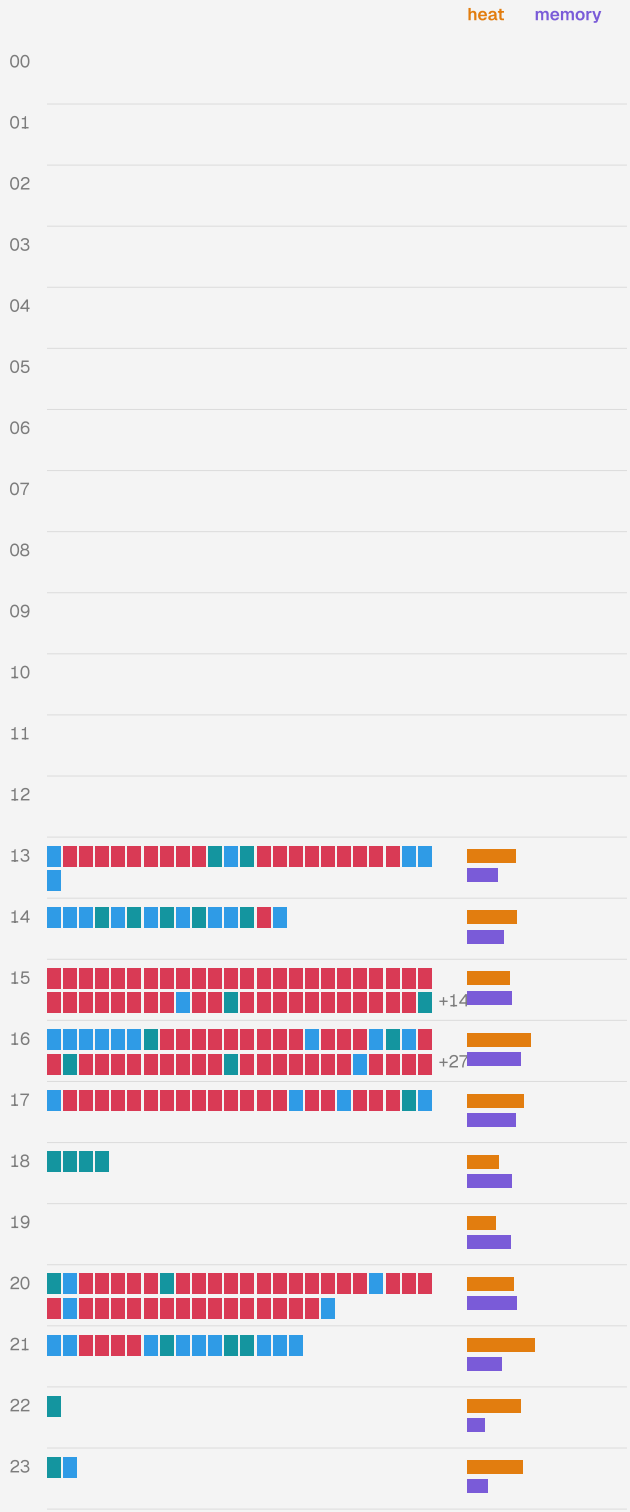
18			4	30.2	67
19				30.2	66
20	4	36	2	30.5	69
21	9	4	3	31.0	62
22			1	30.7	55
23	1		1	30.7	57

copy delete notification heat memory

266 small things, one square each.

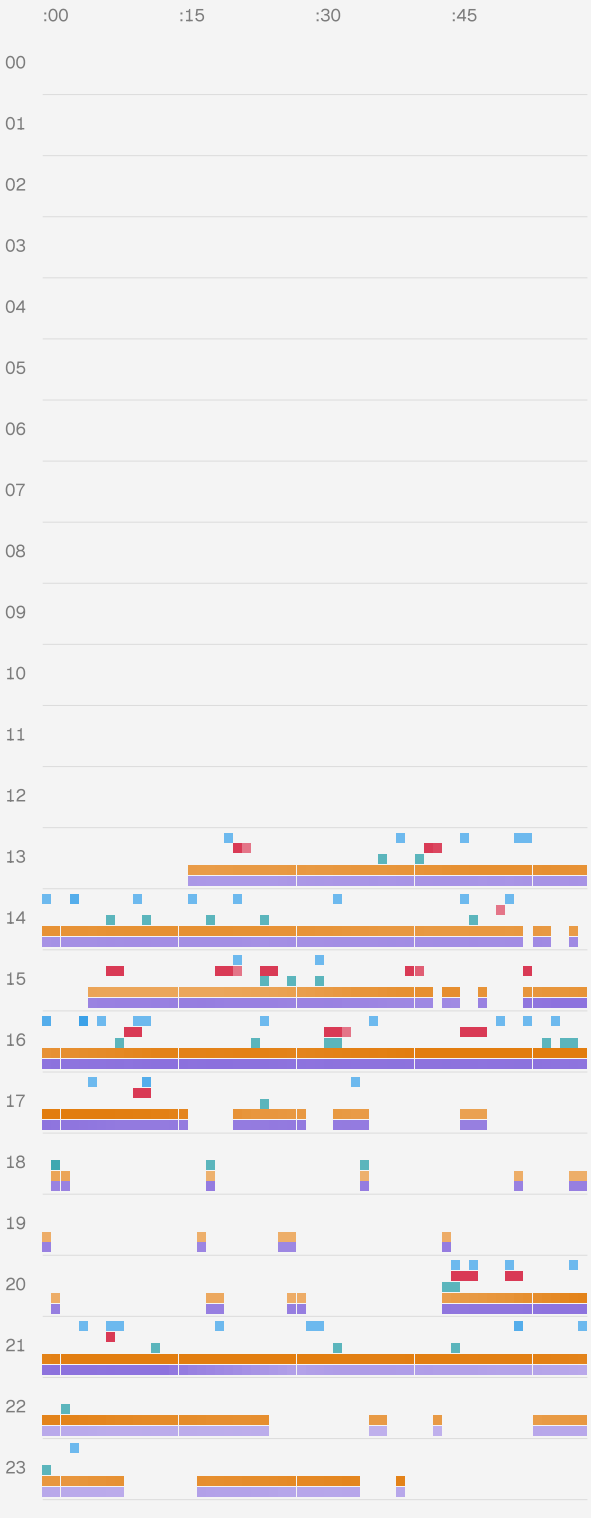
47 copies, 190 deleted words, 29 notifications. 14 hours without a single one.



copy delete notification heat memory

17:11 was the busiest minute: 12 things at once.

Only 88 of the day's 1440 minutes had anything happen.



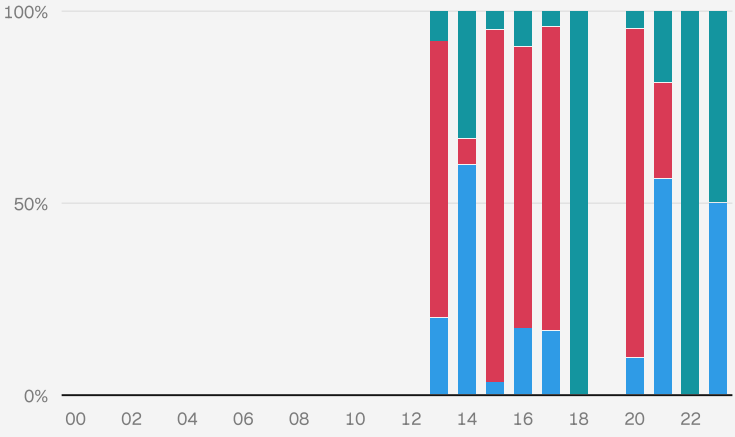
copy delete notification heat memory

Deleting won 5 of the 10 hours that had anything in them.

copying won 3, notifications won 2.

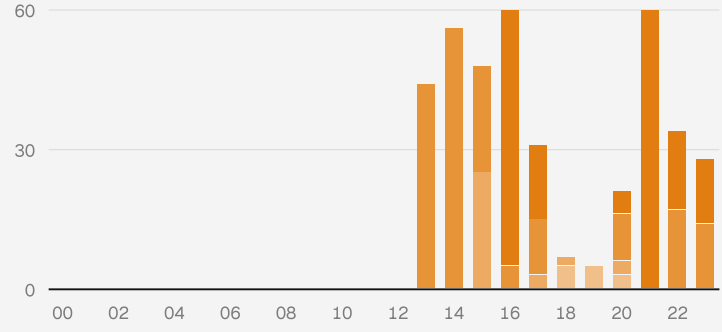
What the hour was made of

share of the events



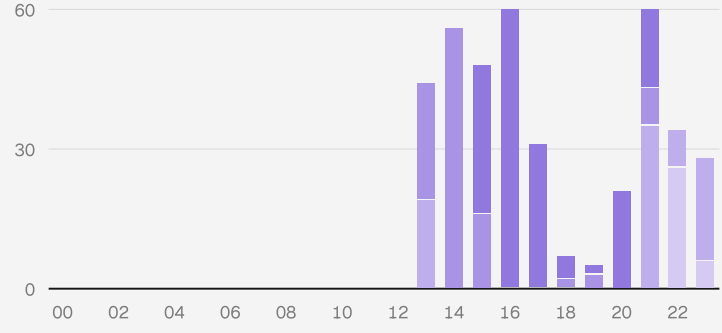
Heat

minutes in each band, cool at the bottom



Memory

minutes in each band, empty at the bottom



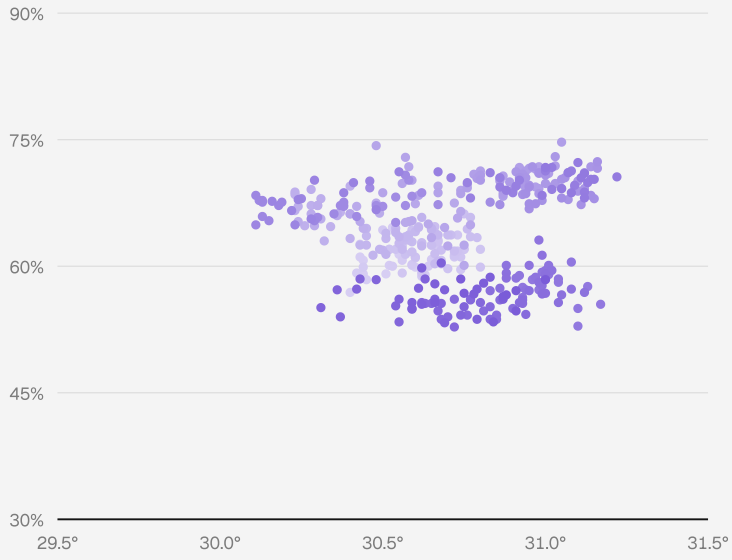
copy delete notification heat memory

Heat and memory mostly ignored each other.

The longest thing copied was 16243 characters, at 23:03.

Heat and memory

one dot for each minute; darker is later in the day



How long it was

characters in each copy and notification, across the day

5 times, copying, deleting and a notification all landed inside the same five minutes.

Two of the three overlapped 12 more times.

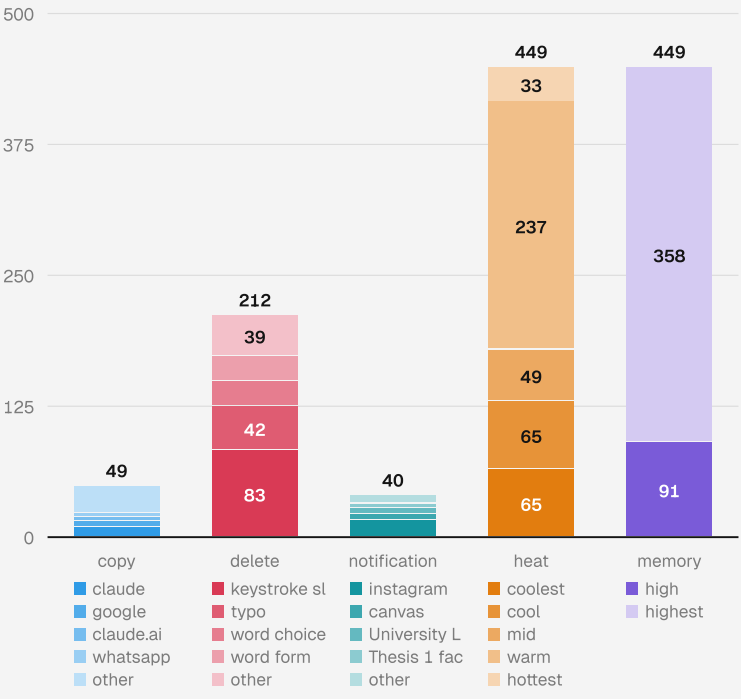
copy delete notification heat memory

claude is where 18% of the copying came from.

instagram sent 40% of the notifications, and 39% of the words I took back were keystroke slip.

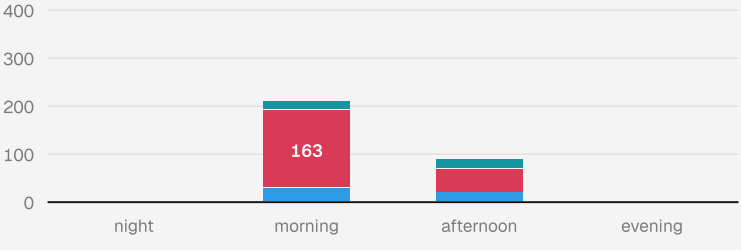
Inside each trace

the day in five columns; each tint is one of its parts



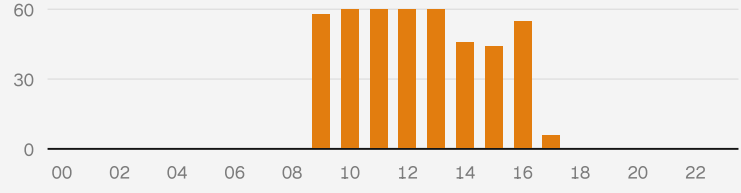
Through the day

events in each part of the day



Awake

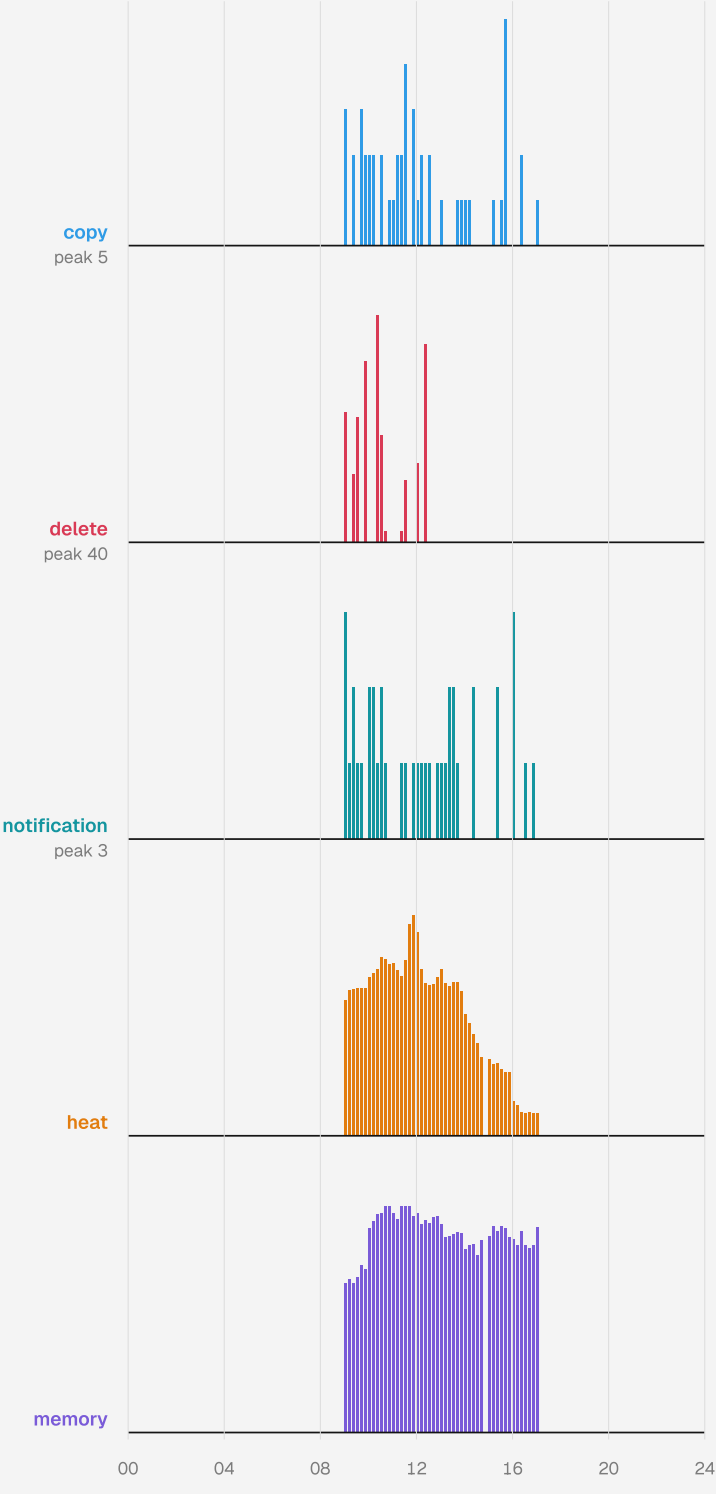
minutes the laptop was awake in each hour



copy delete notification heat memory

Around 10:20 things got frantic: 40 deleted words in ten minutes.

copy topped out at 15:40 (5), notification topped out at 09:00 (3).



copy delete notification heat memory

09:00 was the hour that mattered: 107 events.

Only 9 of the 24 hours had anything in them.

	copy	delete	notification	heat	memory
00

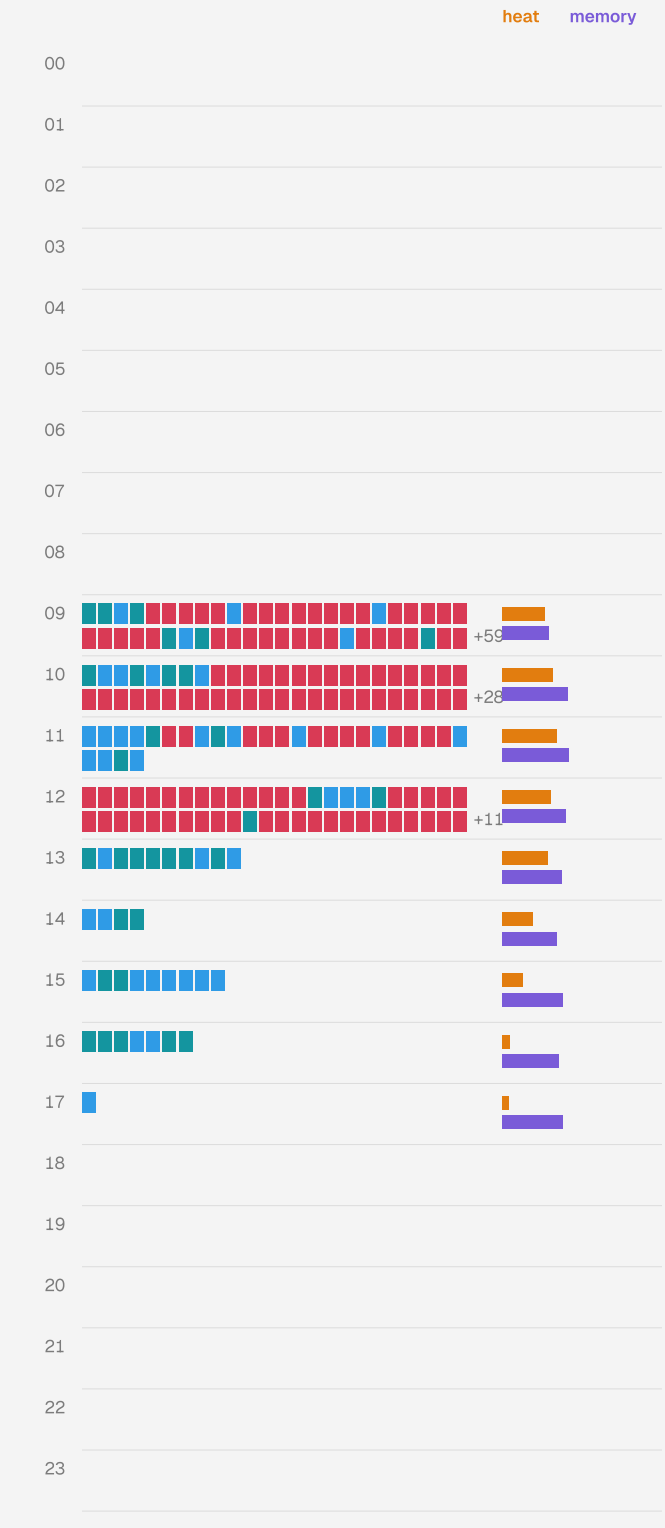
copy delete notification heat memory

301 small things, one square each.

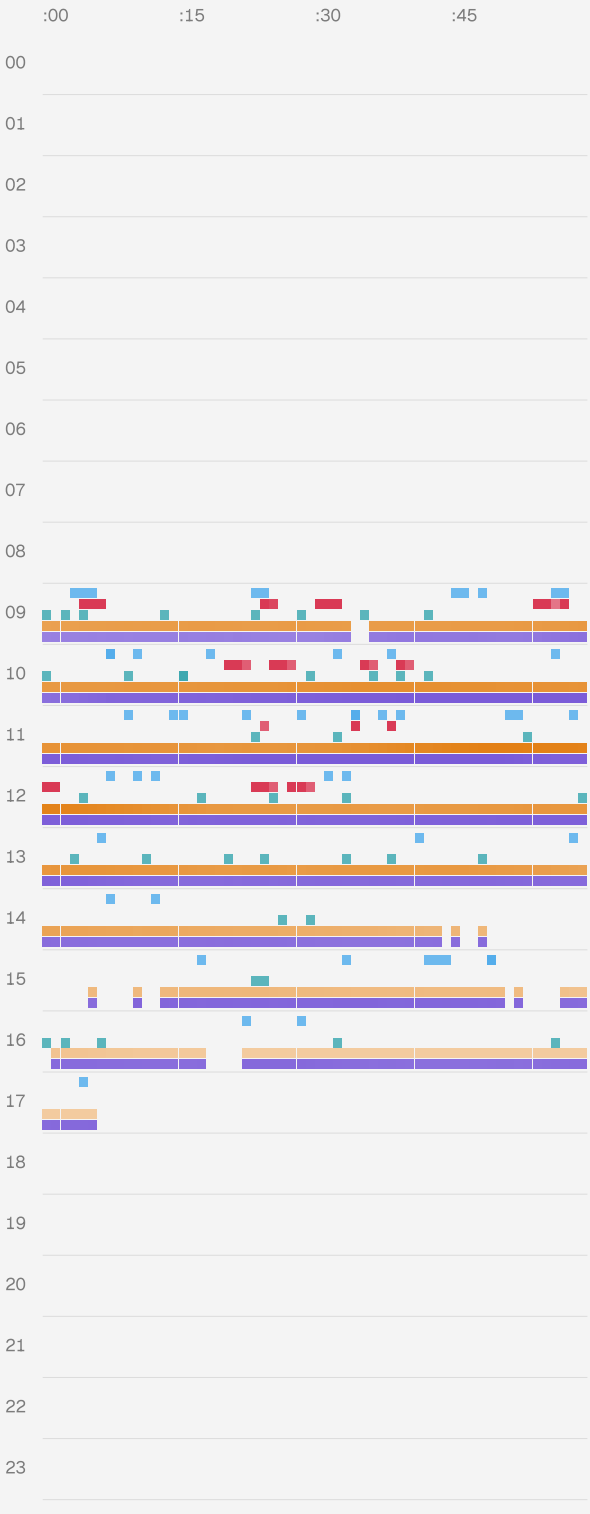
49 copies, 212 deleted words, 40 notifications. 15 hours without a single one.



copy delete notification heat memory

09:55 was the busiest minute: 17 things at once.

Only 106 of the day's 1440 minutes had anything happen.



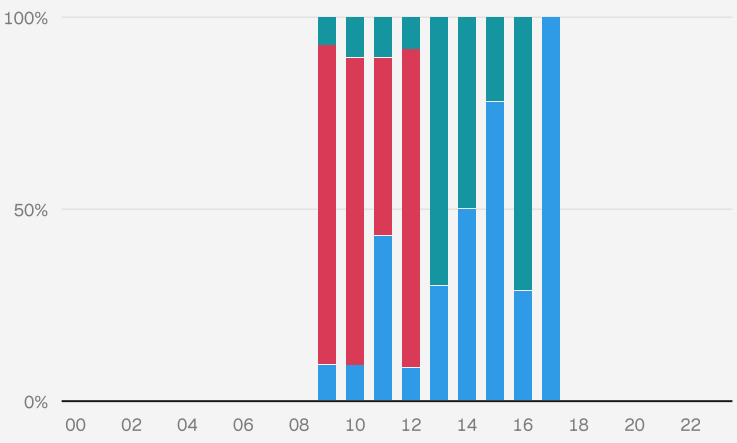
copy delete notification heat memory

Deleting won 4 of the 9 hours that had anything in them.

copying won 3, notifications won 2.

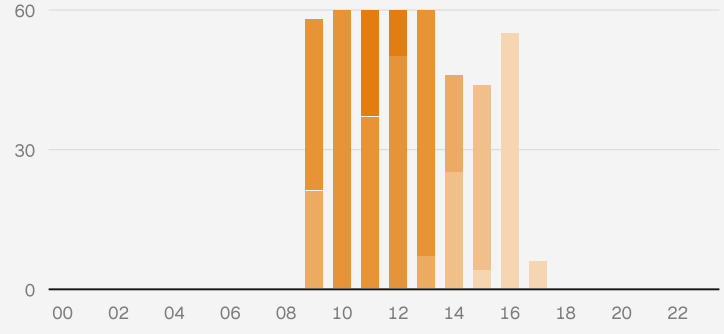
What the hour was made of

share of the events



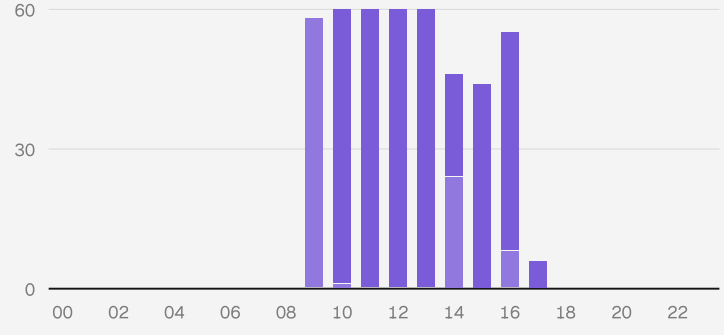
Heat

minutes in each band, cool at the bottom



Memory

minutes in each band, empty at the bottom



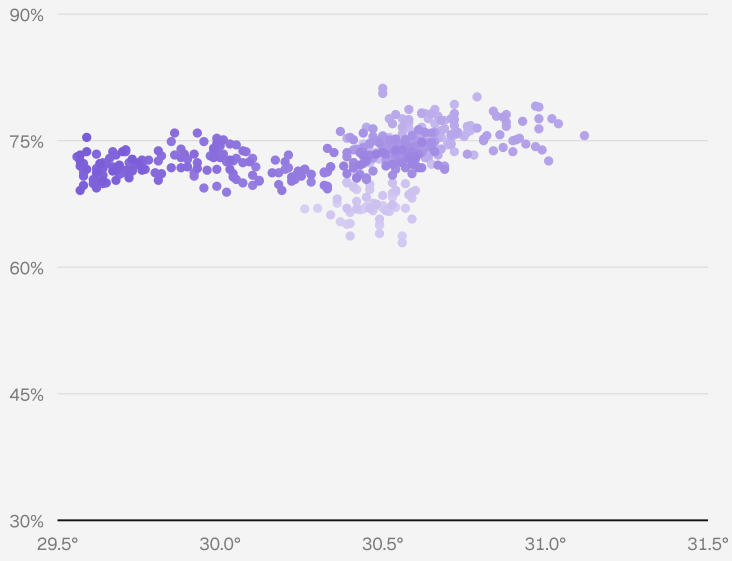
copy delete notification heat memory

Heat and memory climbed together.

The longest thing copied was 16243 characters, at 11:35.

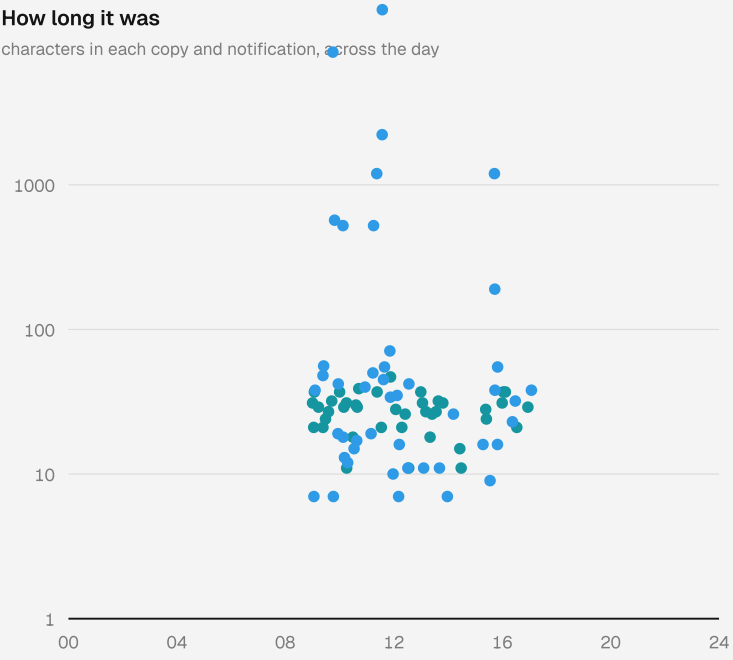
Heat and memory

one dot for each minute; darker is later in the day



How long it was

characters in each copy and notification, across the day



copy delete notification heat memory

Wednesday 14 October

What makes generative AI more disruptive than previous technologies? One factor is certainly the exceptionally rapid pace at which generative AI technologies have been launched, adopted, and adapted. Evolution in the fields of law and policy, by contrast and of necessity, is much slower. It is, moreover, not easy to assess how to calibrate balances among competing copyright interests in the early stages of new-technology evolutions. Generative AI seems poised to have substantial impacts on the careers of professional writers and artists. During the 2023 Writers Guild of America strike, for instance, uses of generative AI are one focus of negotiations. Screenwriters are understandably worried that these technologies will displace them or diminish their compensation.

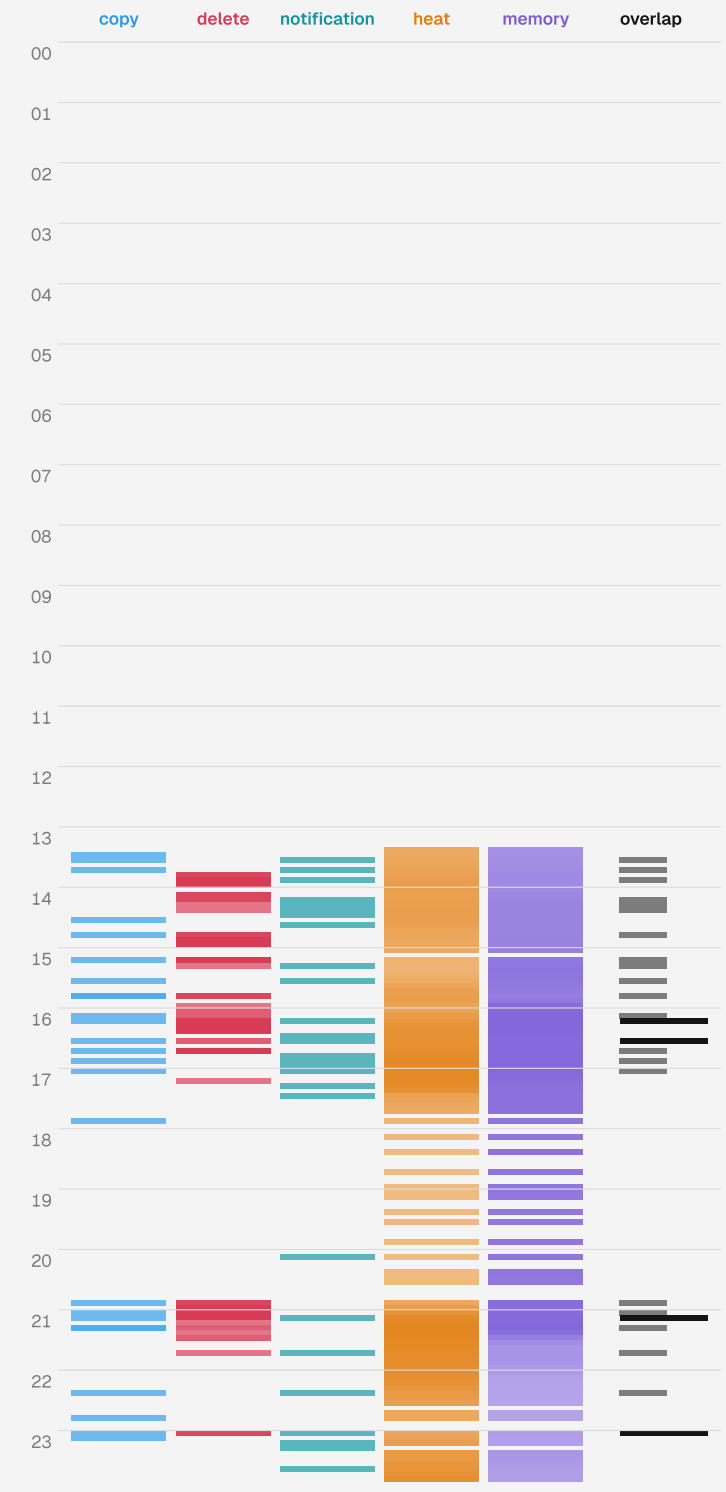
4 times, copying, deleting and a notification all landed inside the same five minutes.

Two of the three overlapped 20 more times.



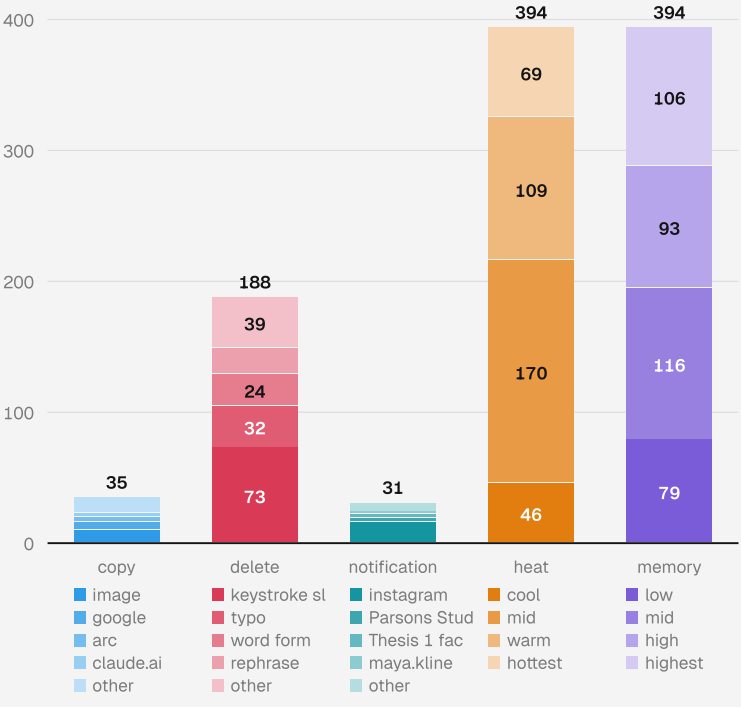
copy delete notification heat memory

image is where 29% of the copying came from.

instagram sent 52% of the notifications, and 39% of the words I took back were keystroke slip.

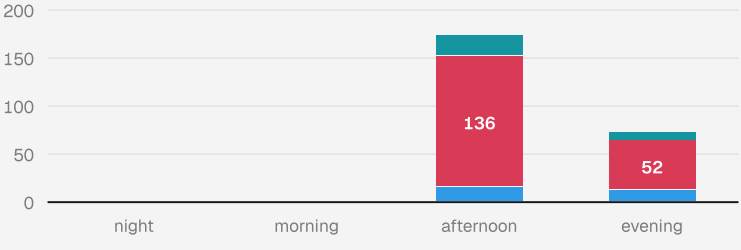
Inside each trace

the day in five columns; each tint is one of its parts



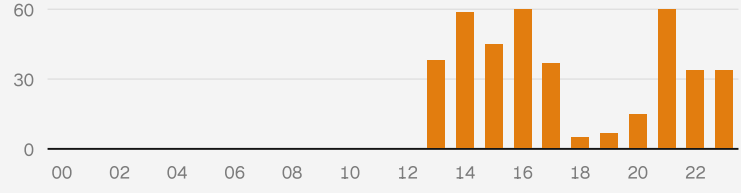
Through the day

events in each part of the day



Awake

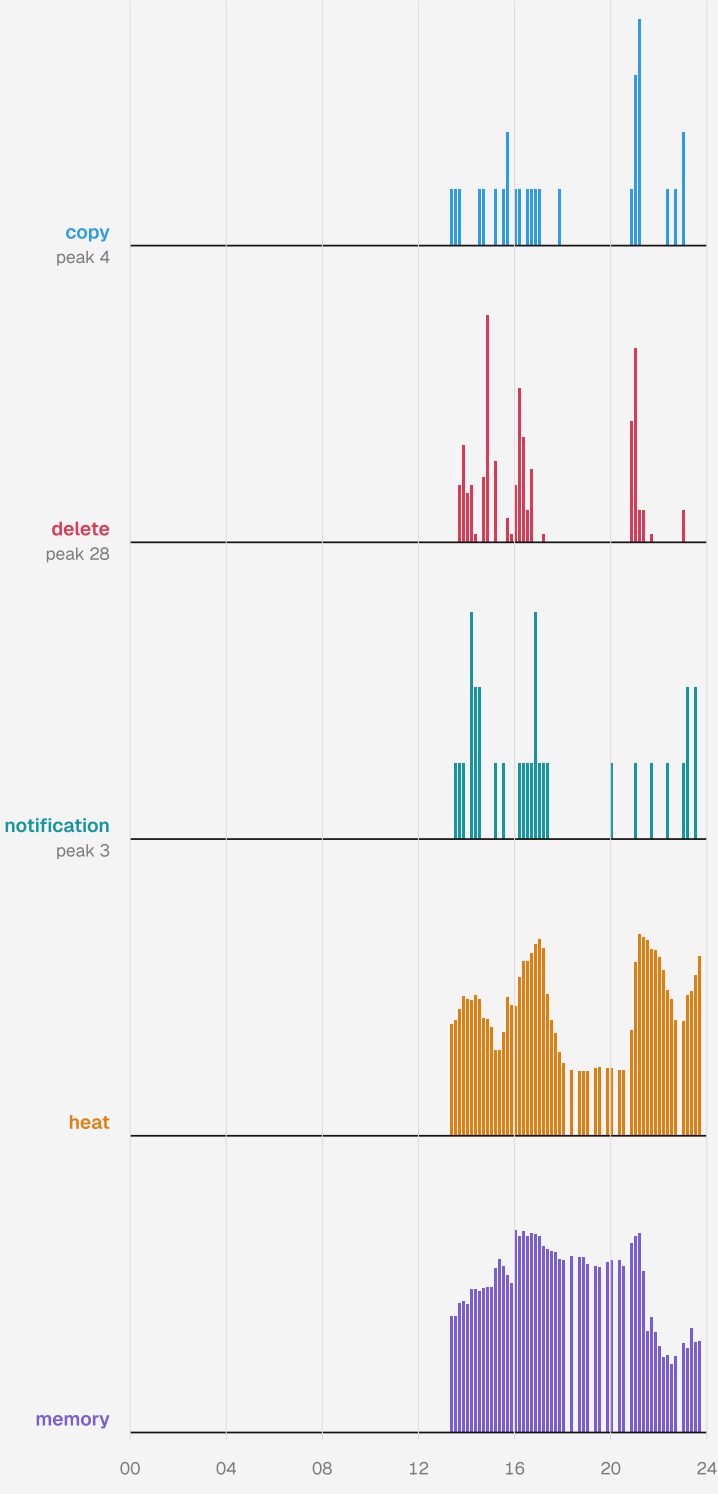
minutes the laptop was awake in each hour



copy delete notification heat memory

Around 14:50 things got frantic: 28 deleted words in ten minutes.

copy topped out at 21:10 (4), notification topped out at 14:10 (3).



copy delete notification heat memory

16:00 was the hour that mattered: 64 events.

Only 9 of the 24 hours had anything in them.

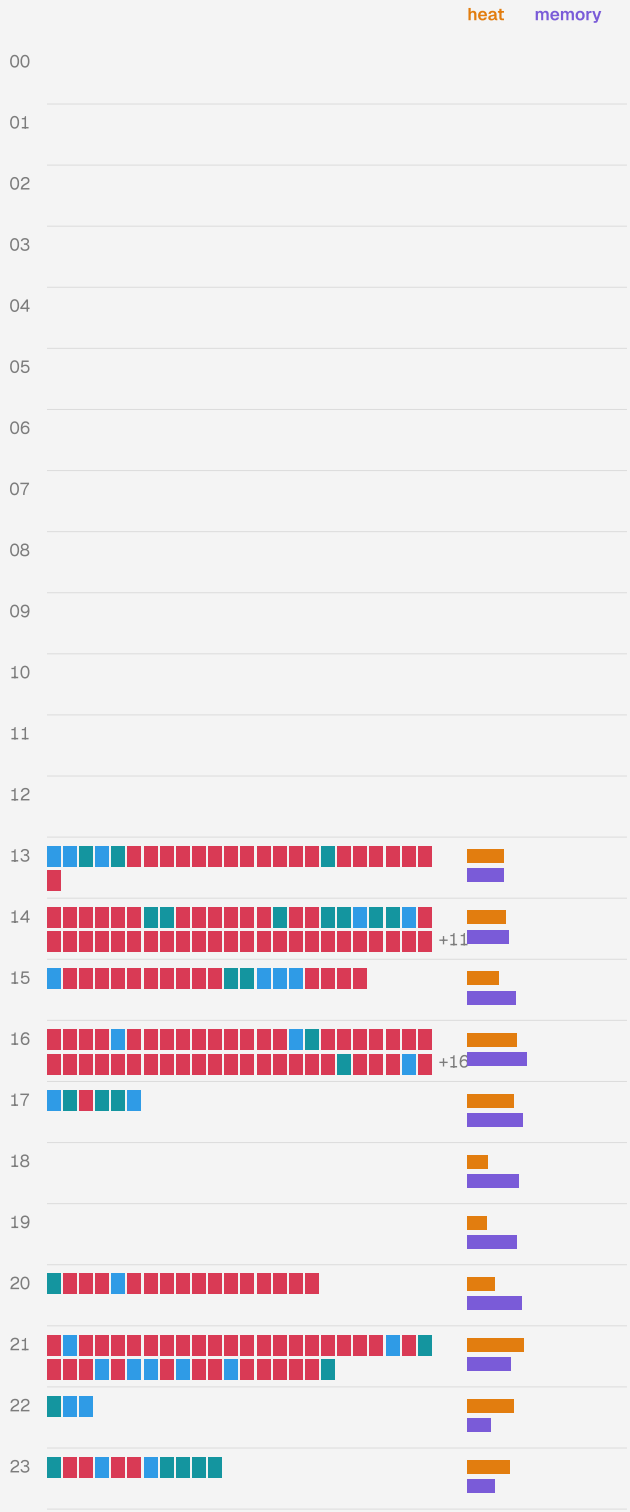
copy delete notification heat memory

247 small things, one square each.

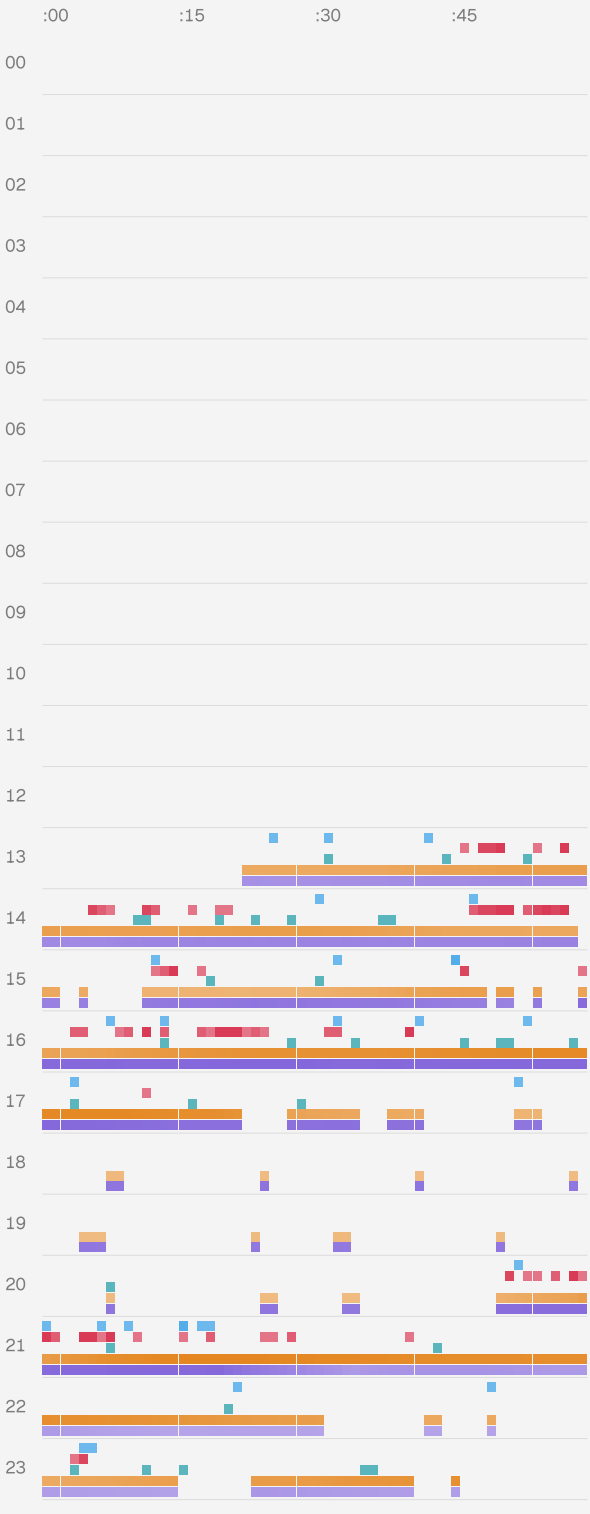
28 copies, 188 deleted words, 31 notifications. 15 hours without a single one.



copy delete notification heat memory

16:19 was the busiest minute: 9 things at once.

Only 110 of the day's 1440 minutes had anything happen.



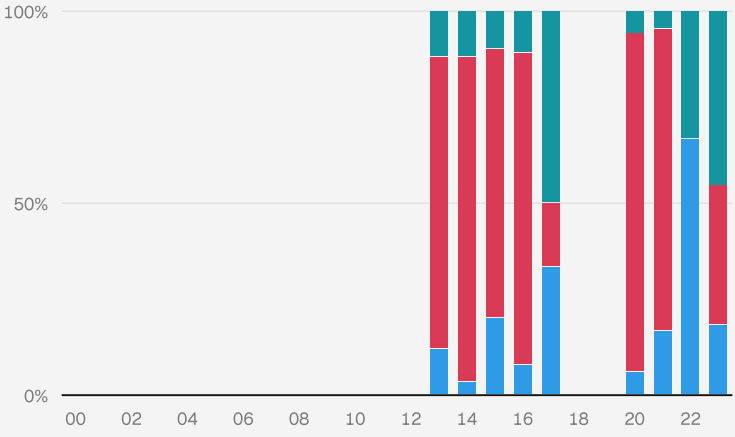
copy delete notification heat memory

Deleting won 6 of the 9 hours that had anything in them.

copying won 1, notifications won 2.

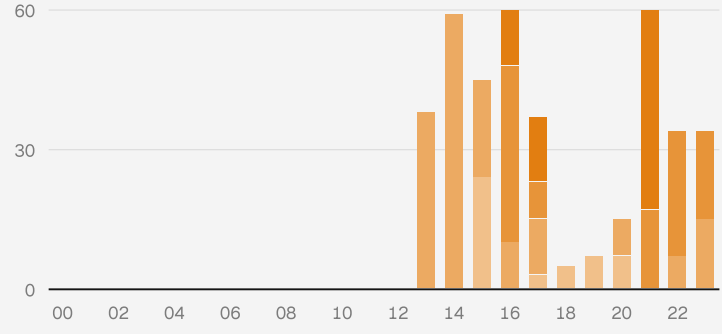
What the hour was made of

share of the events



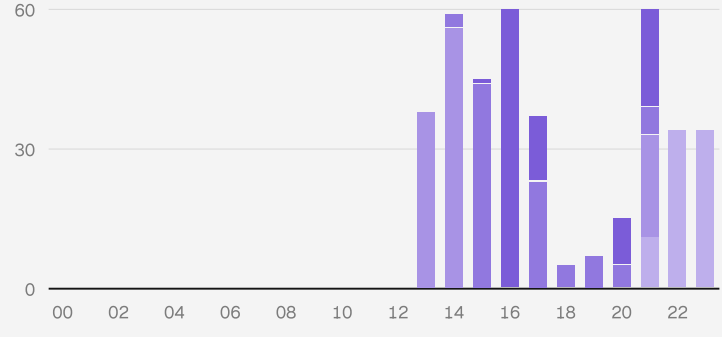
Heat

minutes in each band, cool at the bottom



Memory

minutes in each band, empty at the bottom



copy delete notification heat memory

Heat and memory mostly ignored each other.

The longest thing copied was 5808 characters, at 21:07.

Heat and memory

12:00:17 claude 218 characters
My intention is to portray digital erasure through a physical form, to show that the small, constant losses of a computer add up to something with weight, volume and pattern, even though none of it is ever kept for me.

12:00:21 claude 175 characters
My intention is to portray digital erasure through a physical form, to make something ephemeral that I never see into something I can hold, flip through and read for patterns.

12:00:25 claude 476 characters
My intention is to show how little of my digital day is kept, by turning one week of the things my laptop lets go of — deleted words, notifications, copied text, memory and heat — into a thick book, ordered from the most fleeting to the most lasting. It begins with me as the only…

Colophon

THE BOOK

Residue follows one laptop for a week, 12 to 18 October 2026: what was copied, what was deleted, which notifications arrived, how warm the machine ran and how full its memory was.

HOW IT WAS MADE

The pages were made by prompting an AI to write JavaScript that draws every chart from the logged data, and then basil.js, which builds the book in Adobe InDesign.

TYPE

Set in **Geist** by Vercel and Basement Studio, in Regular, Medium, SemiBold, Bold and ExtraBold. Geist is released under the SIL Open Font License.

PRINTED

Printed in the Design Lab at The New School on tabloid sheets, folded into signatures and stitched by hand.

residue
